MULTILINGUAL UNICODE EXAMPLES

THIS IS A SECTION WITH USAGE NOTES

THIS IS A SUBSECTION

- Use \Section{a}{b}{c} and \SubSection{a}{b}{c} to create sections and subsections, where a is the heading displayed on the page, b is the PDF bookmark heading, and c is the internal PDF link (must be unique). Sections and subsections will appear in the PDF bookmarks. Note the CamelCase command names.
- Use \Entry, \BulletItem, \SubBulletItem, \Item, \SubItem, \NumberedItem, etc., to create entries in the main body of the CV.
- Enclose entry details between \begin{Detail} and \end{Detail} so that they are typeset in a smaller font.
 This is an example of entry detail text enclosed in a Detail environment.
- Use \Gap and \BigGap to insert vertical spaces between entries to improve layout.

THIS IS ANOTHER SUBSECTION

This is a plain **Entry**, followed by an **hfill** and a date range

Oct 2015 – Dec 2015

■ This is a **\BulletItem**.

This is an **\Item**, which has no bullet. Note the alignment with the **\BulletItem** above.

- This is a **\SubBulletItem**.

 This is a **\SubItem**, which has no bullet. Note the alignment with the **\SubBulletItem** above.
- [42] This is a **\NumberedItem**. Change the value of the macro **\MaxNumberedItem** to adjust the indentation width.

LINE, PARAGRAPH, AND PAGE BREAKS

- To create a new line within the same paragraph (i.e., preserving the same paragraph indentation), use \newline instead of \\; the latter will reset the paragraph indentation.
- To create a new paragraph, use \par or simply leave an empty line. Paragraph indentations (from \Entry, \BulletItem, \SubBulletItem, \Item, \SubItem, \NumberedItem, etc.) do not carry across different paragraphs.
- To create a new page, use \newpage.

DATES

- Use the following macros to specify and display dates consistently:
 - \DatestampYMD{yyyy}{MM}{dd} (e.g., \DatestampYMD{2008}{01}{15})
 - \DatestampYM{yyyy}{MM} (e.g., \DatestampYM{2008}{01})
 - \DatestampY{yyyy} (e.g., \DatestampY{2008})
- Change the date format option passed to the document class to adjust how dates are displayed throughout the document:
 - MMMyyyy ("Jan 2008")
 - **ddMMMyyyy** ("15 Jan 2008")
 - MMMMyyyy ("January 2008")
 - ddMMMMyyyy ("15 January 2008")
 - yyyyMMdd ("2008-01-15")
 - yyyyMM ("2008-01")
 - yyyy ("2008")
